The way I'm reading this is that we don't need to spend more time on this – at least until he gets his answers from CB&I. I agree with your assessment of a cost comparison too soon in a project. But let me know if I have misunderstood this. Thanks!

I asked them to detail their procurement process.  
At this point, I just wanted to figure out total procurement costs and anything else you see as significant.

Ginny,  
I want to try to compare the costs % closer to the same % of the project – setup of a lot of the subcontracts would front load the hours so comparing end of project numbers to early in the project could be misleading.  
Gary – can you give an approximate timeframe to compare May Cooperage to CES hours? We can also update the total contract costs columns. The Account Purchase hourly rate is less than Subcontract Mgr – the % do look off – We can look at some others also - Thanks
